

Initially glue 34 x 20mm into bottom of slot  
 Later cut out to suit actual board so it is a good fit  
 To simplify finding box drill small vertical hole at front and back through keel panel on CL before glueing box in place

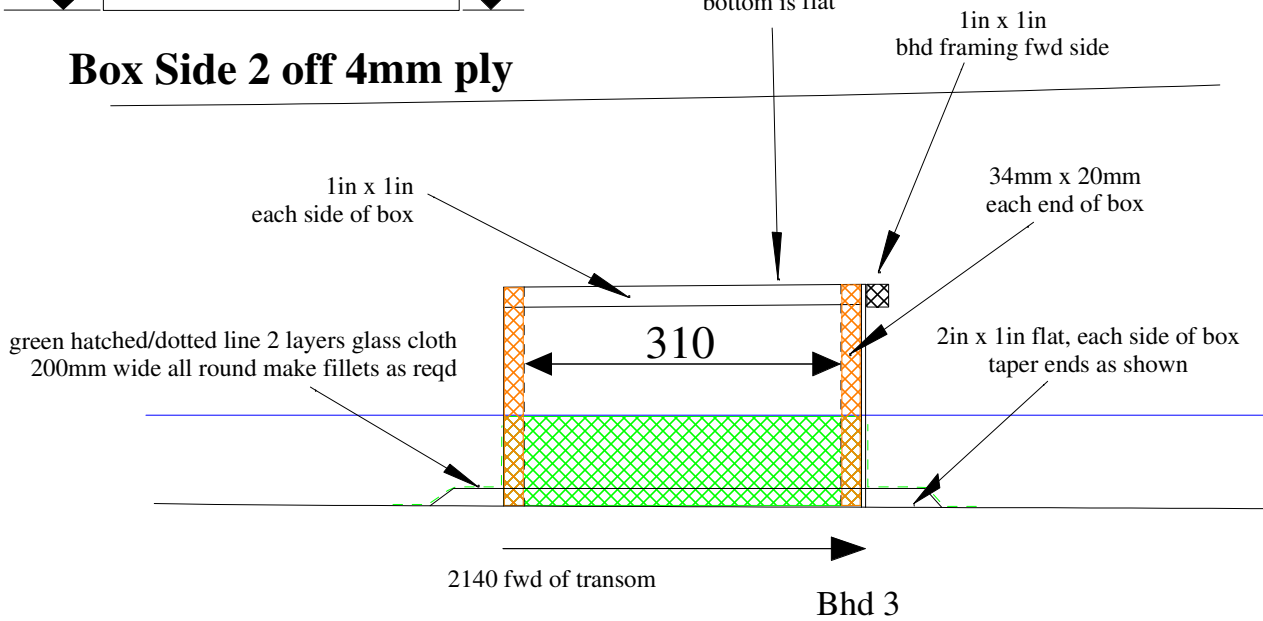

**Top view at box bottom**

**Box Side 2 off 4mm ply**

note tapered box top  
 fwd end 220 high  
 aft end 215 high  
 bottom is flat

**Side View at main hull CL looking to port side**

Final board size 30mm thick x 300 chord  
 Make case slot 34mm wide to allow for at least 1mm for paint/epoxy thickness on each side of board and also inside faces of case  
 Adjust case if necessary to suit own board
